Durgapur, West Bengal, India

Education

University Institute of Technology, Burdwan 2023 – 2026
Bachelor of Engineering in Electrical Engineering — SGPA: 7.7 (Upto 7th Sem) *Burdwan, West Bengal*

Arambagh Government Polytechnic 2020 – 2023
Diploma in Mechanical Engineering — SGPA: 8.8 *Arambagh, West Bengal*

Technical Skills

Languages: Python, JavaScript, SQL, HTML/CSS

ML / AI: TensorFlow, PyTorch, NLP, Deep Learning, Computer Vision, Prompt Engineering, RLHF

Data & APIs: NumPy, Pandas, Altair, PyMuPDF, ReportLab, REST APIs, OpenCV, MediaPipe

Cloud & DevOps: AWS, Docker, Git, Streamlit Cloud

Frameworks: Streamlit, React, Node.js, Microservices, OOP, System Design

Experience

Amazon Sep 2023
Virtual Customer Associate *Remote*

- Resolved **50+** customer cases daily achieving **95%+ CSAT** by applying structured root-cause analysis and data-driven decision-making.
- Automated recurring workflow tasks using Python-based tools, reducing average case-handling time by an estimated 20% and improving team throughput.
- Identified and documented systemic bug patterns; collaborated with product teams to deliver root-cause fixes, improving platform reliability.

Projects

JobLess AI v3.0 |
Python, TensorFlow, NLP, Gemini, Groq, Cohere, REST APIs, Pandas, Docker, Streamlit **Feb 2026 – Present**

- Engineered a production-grade full-stack ML-powered career platform with 5 intelligent modules (Career Analyzer, Resume Builder, Mock Interview, Analysis History, Career Comparison) achieving **99%+ uptime** on **Streamlit Cloud**.
- Designed a multi-provider LLM inference layer integrating 3 deep learning backends **(Gemini, Groq, Cohere)** via **REST APIs** with a BYOK switcher; applied **NLP prompt engineering** to improve response accuracy and coherence by **40%+**.
- Built a PDF intelligence pipeline using **PyMuPDF** for document parsing and **ReportLab** for generation; integrated Pandas-driven skill-gap analysis visualized via **Altair** — reducing resume evaluation time by **60%**.
- Implemented async API orchestration and multi-session state management; applied iterative debugging and code review cycles maintaining **sub-2s** average response latency across all LLM providers under concurrent user load.

VisionTouch AI |
Python, TensorFlow, PyTorch, OpenCV, MediaPipe, Deep Learning, NumPy, MATLAB, OOP **2026**

- Developed a real-time deep learning gesture recognition system achieving **30+ FPS**; designed OOP state machine architecture (cursor, click, volume control) enabling fully contactless human-computer interaction.
- Diagnosed and resolved neural model instability via structured output analysis; implemented **NumPy**-based signal smoothing algorithms reducing cursor jitter by **80%** and improving real-world usability under noisy input conditions.
- Cross-validated model predictions against **MATLAB** signal analysis benchmarks; applied iterative train-test-debug cycles across 10+ edge-case scenarios achieving **95%+** gesture classification consistency.
- Deployed end-to-end live demo with clean modular codebase (detection, mapping, control layers separated); reduced inference pipeline complexity by **35%** through architecture refactoring and redundant computation elimination.

Certifications

Introduction to Generative AI Studio — Google Cloud (2026)

- **Data Analytics Job Simulation — Deloitte Australia (2026)**
- **Data Analyst 101 — Microsoft (2026)**
